Vijayawada, Andhra pradesh - 522303, India

ABOUT

Currently pursuing a B.Tech in Computer Science and Engineering with a specialization in Distributed Ledger Analytics at KL University, Vijayawada. My research focuses on Advancing Sentiment Prediction: The Superiority of Multimodal Over Unimodal Analysis, where I am exploring the integration of textual and visual data to improve sentiment classification accuracy. . Additionally, my expertise in Python, Java, C, SQL, and React.js, combined with my interest in machine learning . My goal is to drive innovation in AI-powered analytics, particularly in distributed systems, to enhance security, transparency, and efficiency in industrial automation.

PROJECTS

Project A: Ride-Sharing Website – Frontend Development

- Developed a modern ride-sharing platform using React.js and Tailwind CSS, ensuring a sleek and responsive user experience.
- Implemented React Router for seamless navigation and Context API for state management.
- Integrated backend APIs for ride requests, user authentication, and trip management.
- Designed an interactive real-time ride-booking and tracking system.
- Focused on UI/UX best practices, utilizing a blue-themed color palette for a professional and futuristic look.

Project B: Music Genre Classification

- Developed a machine learning model to classify music tracks into different genres based on audio features.
- Used Librosa for feature extraction and MFCCs (Mel-frequency cepstral coefficients) to capture essential sound characteristics.
- Trained a Deep Learning model (CNN/LSTM) for improved accuracy in genre classification.
- Evaluated model performance using accuracy, precision, and recall metrics.
- Implemented the system in Python using TensorFlow/Keras and tested on datasets like GTZAN.

RESEARCH

Advancing Sentiment Prediction: The Superiority of Multimodal Over Unimodal Analysis

- Investigating the effectiveness of **multimodal sentiment analysis** by comparing it with unimodal approaches.
- Implementing **LSTM** for text-only analysis and **ResNet** for image-only analysis.
- Developing an **early fusion model** to integrate textual and visual features for improved sentiment classification.
- Evaluating the **performance gains** of multimodal fusion through quantitative and qualitative analysis.

SKILLS

- **Programming Languages:** Python, Java, C
- **Web Development:** HTML5, CSS, React.js
- **Database Systems:** PostgreSQL
- **Tools & Platforms:** Google Colab, Overleaf, Git, GitHub

PERSONALITY TRAITS

- Analytical thinker with strong problem-solving skills
- Effective communicator and team collaborator
- Adaptable, eager to learn, and open to new challenges
- Innovative mindset, continuously seeking process improvements
